In the U.S. annually there are documented

1,400 cases of transverse myelitis
6,000 cases of guillain-barré syndrome
75,000 cases of aseptic meningitis

82,400 cases of polio-like illness every year in the US.

Transverse myelitis, GBS, and aseptic meningitis, which began to be documented separately **after** the introduction of the polio vaccine, currently impact the population at a similar rate as 1950s polio epidemics.
